Re: Letter of Support for Emergency Actions on Mud Creek

Dear Mr. McAbier,

Thank you for your time today to look at Mud Creek at the Elk Spring waterline crossing. Since the end of June, 2021, the Shasta McCloud Management Unit has been experiencing repeated pulsed of mud and debris throughout Mud Creek. Our monitoring has indicated that the system is highly active and conditions can change within a few minutes to hours as more material is mobilized from glacial melt.

In reviewing the area and concern for the Elk Spring waterline, I am authorizing emergency actions to remove material from the channel which is within a few feet of the powerline. I recognize the most recent deposition has put the water source for the community of McCloud at great risk. Due to the unprecedented flows and conditions, I fully support the use of an excavator to pull back material, re-establish a channel that poses less risk to your facilities, and may allow for more material transport from this location. Below are a couple of the points we discussed.

- Ensure equipment and operator safety while performing any work within this very dynamic zone. We recommend lookouts be placed to ensure safety as well as considering the time of day. Generally, the flows and activity are less in the morning.
- Please remove any woody debris to the landing site down the road and buck into lengths that enable us to safely burn the material, approximately 12 feet lengths. Position the material in a way so that it is in the center of the landing.
- Use of excavator, front-end loader, and other mechanized equipment is permitted.
- Placement of material along banks with compaction is permitted while ensuring that any material placed does not inadvertently direct flows out of the channel.
- If large trees (greater than 10" dbh) have to be removed please let us know ahead of time. I am fine with removal of smaller trees and younger trees to provide access on both sides of the channel.

- Please contact us when you plan to start operations and when operations are completed. In addition if you would like us to inspect the area we would be very interested to support a field visit.
- I recognize that there may be a need to keep equipment in the area to maintain the work that you do as the channel is very active.

To ensure we are in contact please don't hesitate to reach out to me at carolyn.napper@usda.gov (530)925-1605 or our hydrologist Tyanna Blaschak at Tyanna.blaschak@usda.gov (530) 251-3936.

Sincerely,

CAROLYN NAPPER
